BVALVE manufacturing range

BVALVE Flow, Systems & Controls is pleased to introduce the most technically advanced DIN bellows sealed globe valve in current market, its BV2506X. Back in the early 2000's BVALVE develops its own ANSI bellows sealed globe valve to supply the huge demand CSP Plants had raised.

Valves were designed for thermal oil medium, a toxic, flammable and highly cancerous fluid, and therefore attributes such as top quality or tightness were indeed mandatory. This application pushed BVALVE to imply chemical valves' main features into its design, coming up with a robust, bubble tight and maintenance free valve.

Nowadays BVALVE partners and stocks are present in most of European countries, north of Africa, and currently growing in Asia and South America. Today BVALVE continues to develop its manufacturing range under the same quality standards, now including PN16, PN25, PN40 and PN40HP bellows sealed globe valves, together with its innovative pressure reducing valve, traps and strainers.
